

IN THE SIMPLE ZONE

Make critical decisions fast

Fast turnaround time at point of care (POC) has the potential to improve the quality of care [1].

In acute care situations, when time matters most, the AQT90 FLEX analyzer delivers reliable quantitative results in 11-21 minutes.

The AQT90 FLEX analyzer has the capability to run up to 5 different tests per blood sample. Supporting you in making timely diagnosis – or ruling out – of several acute conditions.

TnI | TnT | CKMB | Myo | NT-proBNP | CRP | PCT | D-dimer | β hCG

Our extensive range of biomarkers at POC covers myocardial infarction, heart failure, infection, venous thromboembolism and pregnancy.

Manage more patients at the same time - the AQT90 FLEX analyzer allows you to initiate up to 30 tests per hour. Multiple tests can be run simultaneously.
